Biographical Sketch

The United States Fisheries Commission (USFC) was a government program which began in 1871 to investigate potential fisheries and marine faunal areas. Addison Verrill was involved as head scientist from 1871 to 1887 and much of his research is based on this material. Much of the Division of Invertebrate Zoology is made up of these collections and a majority are lots that were split between the Smithsonian's National Museum of Natural History (USNM) and the Yale Peabody Museum (YPM). Much of these archives were generated by assistants to Verrill.

Description of the Material

These archives include original station notebooks and distribution sheets. The distribution sheets contain information on how the specimen lots were divided up between the USNM and YPM.
