Processing Information

Collections are processed to a variety of levels, depending on the work necessary to make them usable, their perceived research value, the availability of staff, competing priorities, and whether or not further accruals are expected. The library attempts to provide a basic level of preservation and access for all collections, and does more extensive processing of higher priority collections as time and resources permit.

This collection received a basic level of processing, including rehousing and minimal organization, in 2010. Information included in the Description of Papers note and Collection Contents section is drawn from an initial survey of the contents. Folder titles appearing in the contents list below are often based on those provided by the creator or previous custodian. Titles have not been verified against the contents of the folders in all cases. Otherwise, folder titles are supplied by staff during basic processing.

This finding aid may be updated periodically to account for new acquisitions to the collection and/or revisions in arrangement and description.

Series IV: Journals, 1956-2007*(2 boxes)*

Series IV. consists of Moore's journal, which is comprised of loose-leaf pages, written on both sides and compiled into sixteen "volumes" and three "levels." Each level was originally supported by a wooden base with strings on the top and bottom ends for maneuvering. The levels were stacked one on top of the other in a cardboard box with the first level ("L1") on the bottom and the third level ("L3") on the top; and the volumes were stacked in reverse chronological order on each level. For example, "L1" contained Volumes I to VI, with Volume I on the bottom and Volume VI on the top. For preservation and access purposes, the journal pages have been rehoused in acid-free folders. But the original dividers and cardboard box have been retained for reference and study purposes.

Arranged in chronological order.
